Get Out and Play!

King Swings offers both a residential and commercial line of engaging, safe, and fun swing sets and playgrounds. Our residential line serves homeowners, businesses, churches, or other entities that do not require an ASTM-compliant playground.

Our commercial playground line is built to ASTM codes, making it a perfect fit for a commercial playground application. The following playgrounds are residential sets built in a commercial setting.

Ships Wheel

6 Position Commercial Swing Beam

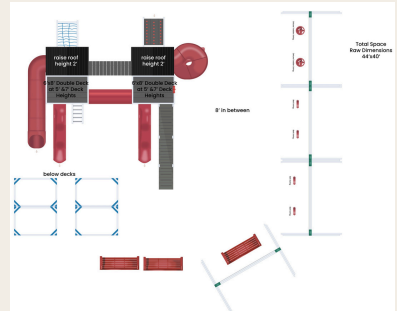

(4) Belt Swings

(2) Deluxe Toddler Swings

Raw Dimensions: 58'x36'
Critical Fall Height: 8'
#18040

Customization

Customizing in playground settings involves designing and constructing playgrounds that meet the specific needs and preferences of the family, community, school, or organization ordering the playground. Customizing usually includes adding or subtracting various components, such as climbers or slides, or designing the layout for safety, accessibility, or to fit in the available space.

Residential Playground Customizing

For our residential line playgrounds, customization might include choosing different slides, raising or lowering the tower height, changing the layout to fit the backyard, or choosing a different colorway. Residential line playgrounds have a lot of flexibility for customizing as they do not meet ASTM commercial codes.

Commercial Playground Customizing

Our commercial line of playgrounds is built to comply with ASTM F1487-21 codes and CPSC guidelines. Our commercial line is also ADA-compliant. Because these playgrounds are built to comply with the codes, we do not offer customization with our commercial line of playgrounds.

King Swings Commercial offers ready-to-go playground packages. Packages include one or more playgrounds, the required playground surfacing, and a border, making it a simple plug-and-play solution.

Playground Surfacing

Playground surfacing, whether wood or rubber mulch, sand, or other material, is used in playgrounds for impact attenuation. It provides cushioning to reduce the risk of injury from falls and can also help with drainage and maintenance.

Commercial Playground Mulch

The depth or thickness required for commercial playgrounds depends on playground height and surfacing material type. For King Swings Commercial Playgrounds to comply with the code, 12" of uncompressed wood mulch or 6" of rubber mulch is required.

Residential Playground Mulch

In a residential setting, we recommend using wood or rubber mulch about 3" deep. If you are purchasing a residential line but it is being installed in a commercial setting, we recommend a minimum of 4" uncompressed wood or rubber mulch.

The depth of mulch you purchase dictates which border size you will need. Our standard-sized border is used in residential lines as it works great with the 3" or 4" depths. For commercial customers who require a greater depth, we will use our taller 10-inch border.
